

Welcome to

Python Flask: Web Development Basics to Machine Learning Deployment

By Md. Azizul Hakim

Lecturer in Daffodil International University

>>> Sentiment analysis is a natural language processing task that determines the emotional tone behind a piece of text.

>>> TextBlob is a Python library for processing textual data. It provides a simple API for diving into common natural language processing (NLP) tasks such as part-of-speech tagging, noun phrase extraction, sentiment analysis, classification, translation, and more.

To build sentiment analysis project like this we can use-

1. VADER (Valence Aware Dictionary and sEntiment Reasoner)
2. Hugging Face Transformers (Pretrained Models like BERT)
3. spaCy with Custom Models
4. Custom ML Model (Logistic Regression, SVM, etc.)
