Welcome to

Python Flask: Web Development Basics to Machine Learning Deployment

By Md. Azizul Hakim
Lecturer in Daffodil International University

Installation

Windows
- > mkdir myproject (any name for your flask project)

- > cd myproject (changing the directory to project folder)

- > py -3 -m venv myvenv(creating a virtual environment named myvenv)

For Ubuntu/MacOS
- > mkdir myproject (any name for your flask project)

- > cd myproject (changing the directory to project folder)

- > py -3 -m venv myvenv(creating a virtual environment named myvenv)

Installation

Windows
- **activate virtual environment: myvenv\Scripts\activate**
- **install Flask: pip install Flask**

For Ubuntu/MacOS
- **activate virtual environment: source myvenv/bin/activate**
- **install Flask: pip3 install Flask**

Thank You
